### **DETAILED ACTION**

1. Claims 1, 3-9, and 11-14 are allowed. Claims 2 and 10 are cancelled.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Reitseng Lin on 04/21/2008.

3. The application has been amended as follows:

#### **In the claims:**

- a. Claims 1, 3-9, and 11-14 are allowed. Claims 2 and 10 are cancelled.
- b. Claim 1. (Currently amended) A system for processing data packets comprising a plurality of data blocks, the system comprising:

a controller; and

a plurality of data processing blocks connected in a sequence, each data processing block also connected to the controller for receiving respective configuration parameters from the controller, the configuration parameters being used for controlling the processing of the data blocks within each respective data processing block, wherein

each data processing block receives an input data block and provides an output data block utilizing a handshaking protocol using a ready to receive signal to signify that the data processing block is ready to receive a data block and a ready to send signal to signify that the data processing block is ready to send the data block, and a data block is transferred between a pair of data processing

Art Unit: 2154

blocks when both the ready to receive and ready to send signals are set between the pair of data processing blocks, each data processing block transmits a first data signal along with a first output data block associated with a particular data packet to a subsequent data processing block in the sequence, wherein the first data signal is propagated through the sequence of data processing blocks with the first output data block, and each data processing block changes to new configuration parameters upon receipt of the first data signal from a previous data processing block in the sequence, ~~whereby~~ wherein the configuration parameters are ~~only~~ changed only at ~~on~~ a data packet boundary.

c. Claim 9. (Currently amended) In a system comprising a plurality of data processing blocks connected in a sequence, each data processing block also connected to a controller for receiving respective configuration parameters from the controller, the configuration parameters being used for controlling the processing of the data blocks within each respective data processing block, a method for processing data packets comprising the steps of:

identifying, in each data processing block, a first data block associated with a particular data packet;

reading new configuration parameters from the controller in response to the identifying step;

performing data processing utilizing the configuration parameters read from the controller;

providing, by one data processing block, a ready to receive signal when the one data processing block is ready to receive a data block and a ready to send signal when the one data processing block is ready to send a data block, wherein a data block is transmitted between a pair of data processing blocks when both the ready to receive signal and the ready to send signal are present between the pair of data processing blocks; and

transmitting a first data signal along with a first output data block associated with the particular data packet wherein the first data signal is

propagated through the sequence of data processing blocks with the first output data block, and each data processing block changes to new configuration parameters upon receipt of the first data signal from a previous data processing block in the sequence, whereby wherein the configuration parameters are changed in the data processing blocks only at a data packet boundary.

#### **REASONS FOR ALLOWANCE**

4. The following is an examiner's statement of reasons for allowance:

The following prior arts were considered:

Tillmann et al. (US 6, 564, 265)

Christensen, Jacob (US 2002/0136217)

Welfeld, Feliks J (US 2005/0141503)

Soejima et al. (US 6, 654, 823)

Trost et al. (US 2002/0151275)

All of these prior arts do not teach "each data processing block receives an input data block and provides an output data block utilizing a handshaking protocol using a ready to receive signal to signify that the data processing block is ready to receive a data block and a ready to send signal to signify that the data processing block is ready to send the data block, and a data block is transferred between a pair of data processing blocks when both the ready to receive and ready to send signals are set between the pair of data processing blocks, each data processing block transmits a first data signal along with a first output data block associated with a particular data packet to a subsequent data processing block in the sequence, wherein the first data signal is propagated through the sequence of data processing blocks with the first output data block, and each data processing block changes to new configuration parameters upon receipt of the first data signal from a previous data processing block in the sequence, wherein the configuration parameters are ~~only~~ changed only a data packet boundary provided with the controller connected to each data processing block

for receiving respective configuration parameters and the configuration parameters being used for controlling the processing of the data blocks within each respective data processing block.

None of the prior arts of record teach or fairly suggest the claimed limitations.

Also, Claim 1's determination for compliance to 35 U.S.C. §101 was made from the intrinsic evidence provided in the Specification on page 4, line 31-33 and Fig. 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ashok B. Patel whose telephone number is (571) 272-3972. The examiner can normally be reached on 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on 571-272-1915. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
